Skills

HTML/JAVASCRIPT/REACT /NEXT.JS/SEQUELIZE/MYSQL/MONGODB/GRAPHQL/ELIXIR

Applications

CLOTHING STORE CMS – REACT/JAVASCRIPT/TAILWIND/SEQUELIZE/MYSQL [GitHub] | [Live App]

- This web software is devised of an API and frontend I designed from the ground up. This application takes into consideration stock values, price per unit, user to order relationships, and everything else a small business owner would need to get their startup off the ground.
- Why pay upwards of 100$ per month for CMS software when I can engineer a headless CMS myself. This highly agile API can be consumed wherever and whenever.

CHIPOTLE MEAL GENERATOR – TYPESCRIPT/VITE/TAILWIND [GitHub] | [Live App]

- This application randomly generates a chipotle meal and displays the prices and calorie count at the bottom, making it an easy to use and accessible alternative to making hard decisions while in line.
- With US consumers spending over 300 Billion dollars and over 2.8 Thousand locations, Chipotle is a company that is synonymous with health-conscious Americans and my application seeks to ease unsure newcomers in and help add some spice for seasoned Chipotle goers.

UPPER LEVEL KICKS – REACT/JAVASCRIPT/FIREBASE/MYSQL/SEQUELIZE/NODE [GitHub] | [Live App]

- This web page consolidates sneaker data from the leading resell websites around the world. GOAT and StockX lead the resell market and are second to only Ebay themselves. With the highest selling shoe being sold at auction for 1,000,000$. This site allows users to save view and browse shoes from these top reselling companies.

Education

BM | OBOE PERFORMANCE | CALIFORNIA STATE UNIVERSITY FULLERTON | 2015 – 2020

FULL STACK WEB DEVELOPER BOOTCAMP | UNIVERSITY CALIFORNIA RIVERSIDE | 2021-2021

Work Experience

SOFTWARE ENGINEER | TATEM | REACT/TYPESCRIPT/TAILWIND/SASS | 2022-CURRENT

- As the second addition to the engineering team I aid the founding engineer in adding core features to the product as well as taking entire page mockups and creating landing pages from the ground up.
- I also implement very large frontend facing features all on my own. Large additions such as accessibility updates and full end to end integrations are a part of my day to day work.
- I work all over the stack, handling redux, firebase calls, tailwind implementations and frontend Javascript. Also working with React for our dynamic site and NextJS in our static site.
