Work Experience

Software engineer | BYTREK | Javascript/node/tailwind/mysql/react/AI | 2023-Present

- Building enterprise grade software. Providing services to outdated systems and bringing them into the modern age.
- Utilizing AI and fast modern web software my team and I increase our client's systems productivity exponentially.

Software engineer | Tatem | React/typescript/Tailwind/sass | 2022-2023

- As the second member of the engineering team I contributed core features throughout the product. Working across an entire stack I singlehandedly implemented consumer facing additions as well as backend functionalities.
- I assisted the company through 2 pivots. One of which was to a buyer-to-buyer marketplace (https://jardy.com) which was built in around a single month and sold for $50,000.
    - On this application I worked a lot with Svelte and SvelteKit on the frontend and connected to a Supabase backend.
- I worked with Server-Side Rendering and Static Site Generation all of which make for best SEO practices and generally better performing web software.
- Since I aided the company in 2 pivots I was there from the ground up, building, architecting, and taking part in the growth portion of a Venture Capital backed startup.

Applications

Clothing Store CMS – React/JavaScript/Tailwind/Sequelize/MySQL GitHub | Live App

- This web software is devised of an API and frontend I designed from the ground up. This application takes into consideration stock values, price per unit, user to order relationships, and everything else a small business owner would need to get their startup off the ground.
- Why pay upwards of 100$ per month for CMS software when I can engineer a headless CMS myself. This highly agile API can be consumed wherever and whenever.

Chipotle Meal Generator – Typescript/Vite/Tailwind [GitHub](#) | [Live App](#)

- This application randomly generates a chipotle meal and displays the prices and calorie count at the bottom, making it an easy to use and accessible alternative to making hard decisions while in line.
- With US consumers spending over 300 Billion dollars and over 2.8 Thousand locations, Chipotle is a company that is synonymous with health-conscious Americans and my application seeks to ease unsure newcomers in and help add some spice for seasoned Chipotle goers.

Upper Level Kicks – React/JavaScript/firebase/MySQL/node [GitHub](#) | [Live App](#)

- This web page consolidates sneaker data from the leading resell websites around the world. GOAT and StockX lead the resell market and are second to only Ebay themselves. With the highest selling shoe being sold at auction for 1,000,000$. This site allows users to save view and browse shoes from these top reselling companies.

Education

Full Stack Web Developer Bootcamp │ University California Riverside │ 2021-2021

BM │ Oboe Performance │ CALIFORNIA STATE UNIVERSITY FULLERTON │ 2015 – 2020
